

SHOHORAB AHMED

Senior Software Engineer — Backend & Full-Stack Developer

Mirpur 11, Dhaka, Bangladesh — +8801751324525 — +8801303054266

shohorabshanto@gmail.com — [Portfolio](#) — [LinkedIn](#) — [GitHub](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with over 5 years of professional experience specializing in backend and full-stack architecture. Proven track record building and deploying scalable SaaS applications, high-traffic enterprise architectures, and AI-driven systems. Expert in microservices, AWS cloud infrastructure, Docker/Kubernetes containerization, and agile team leadership, consistently aligning complex technical executions with fast-paced business milestones.

TECHNICAL SKILLS

Backend Technologies: PHP (Laravel), Node.js, Express.js, Python (FastAPI), RESTful API Development, Microservices Architecture, Sanctum, Custom Authentication Protocols

Frontend Technologies: JavaScript, TypeScript, React.js, Next.js, Vue.js, Nuxt.js, Redux Toolkit, Tailwind CSS, AJAX, HTML5, CSS3, JSON

AI, ML & Automation: OpenAI Agents SDK, LangChain, RAG Systems, GPT-4, HuggingFace, Vector Search (FAISS), Computer Vision (OpenCV, YOLO, SAM), Whisper ASR, MMS-TTS, Sentence Transformers

Databases & Caching: MySQL, PostgreSQL, SQLite, FAISS Vector DB, Redis Caching & Session Management

DevOps & Cloud Infrastructure: AWS (EC2, S3), Docker Containerization, Kubernetes Orchestration, CI/CD Pipelines, Git Version Control, Linux Systems (Ubuntu, Kali), Windows Subsystem for Linux (WSL2)

Programming Languages: PHP, JavaScript, TypeScript, Python, Java, C/C++

WORK EXPERIENCE

Senior Software Engineer

Jul 2025 – Present

WizTecBD

Dhaka, Bangladesh

- Oversaw full-cycle development of large-scale enterprise software architectures, ensuring system scalability, multi-tenant compliance, and rigid architectural integrity.
- Led the development of highly interactive, data-driven administrative dashboards and management tools, improving baseline processing and UI performance by 35% while supporting 50k+ active users.
- Directed the integration of advanced tracking, monitoring, and analytical reporting systems, successfully reducing manual administrative reporting workloads by 60%.
- Guided and coached a departmental team of 6 junior and mid-level developers, enforcing strict code review cycles, proper testing standards, and continuous integration methodologies to accelerate overall sprint feature delivery by 30%.

Senior Software Engineer

Sep 2024 – Jun 2025

Adventure Dhaka Ltd. (Japan-based multinational company)

(Remote/Dhaka, Bangladesh)

- Developed and maintained the international [Skyticket Online Travel Agency \(OTA\)](#) ticketing system, significantly optimizing high-volume booking modules and increasing successful customer checkouts by 25%.
- Built, refactored, and optimized localized hotel service modules, ensuring a seamless, low-latency reservation experience across web and mobile viewports.
- Integrated numerous complex third-party vendor and localized payment gateway APIs, expanding overall system capabilities and maintaining 99.9% uptime operational reliability.
- Collaborated deeply within cross-functional Agile teams, driving technical planning sessions, strict pull-request reviews, and systematic CI/CD releases that mitigated production deployment errors by 50%.
- Analyzed and optimized bottlenecked legacy database queries, resulting in minimized API latency and an immediate 40% boost in critical endpoint response rates.

Senior Software Engineer & Software Developer

Jan 2021 – Aug 2024

Viser X

Dhaka, Bangladesh

- Led architectural design and backend development of a centralized web-based monitoring, evaluation, and multi-level approval system for the Department of Public Health Engineering (DPHE).

- Integrated GIS mapping and GPS hardware tracking to enable real-time field validation, reducing on-site verification response times by 60%.
- Developed executive analytics dashboards for project surveillance, asset tracking, and resource allocation, improving data-driven decision-making.
- Built and delivered scalable B2B/B2C e-commerce platforms and inventory systems handling 500+ daily SKUs and 10k+ transactions.
- Designed multi-level authorization workflows for inspection tracking, billing, and verification, saving ~ 15 hours/week in operational effort.
- Contributed across the full SDLC, including requirement analysis, database design, API development, frontend implementation, and production deployment.
- Mentored junior engineers and digitized 100% of manual workflows, significantly improving team productivity and operational efficiency.
- Collaborated with senior engineers to adopt best practices in system design, version control, and high-performance development pipelines.

PROJECTS

ZB Design – AI Furniture Rental & Marketplace

Tech Stack: PHP (Laravel), React.js, Tailwind CSS, CV Models, MySQL

- Designed end-to-end relational database schemas and optimized batch API synchronization pipelines.
- Deployed automated, data-driven predictive pricing engines to calculate flexible rental and leasing metrics dynamically.
- Integrated computer vision overlay logic for real-time digital item placement previews within physical room visuals.

Skyticket – Global OTA Holiday Booking Infrastructure

Tech Stack: PHP (Laravel), Java, JavaScript, Microservices, MySQL

- Refactored legacy monolithic codebase elements into specialized, decoupled microservices handling high-throughput actions.
- Rewrote core ticket searching algorithms, mailing services, and transactional confirmations to drop search times.
- Stabilized automated invoicing, voucher generations, and secure global payment gateway processing pipelines under high traffic spikes.

TaskFino – Multi-Tenant SaaS Enterprise Management Platform

Tech Stack: React.js, PHP (Laravel), Redux Toolkit, RESTful APIs, MySQL

- Engineered comprehensive process modules including HRMS, automated corporate payroll engines, asset logs, and loan management books.
- Built an intuitive CRM pipeline containing custom data filters and lead status tracking hooks with real-time interactive Kanban boards.

Winvoice – Cloud Invoicing SaaS Engine

Tech Stack: PHP (Laravel), React.js, PDF Compilation Engine, PostgreSQL

- Developed backend configurations supporting secure multi-currency exchange processing and customizable, dynamic business parameters.
- Programmed server-side automation logic managing real-time regional coupon, discount, and complex localized tax calculations.

Perfecto & Sepia – High-Performance Multi-Vendor E-commerce Ecosystems

Tech Stack: Next.js, Laravel, Redis, Webhooks, MySQL

- Implemented advanced decoupled architectures utilizing Next.js for lightning-fast server-side rendering (SSR).
- Configured a highly optimized Laravel API structure paired with Redis clusters to cache active store inventories and user shopping carts.
- Built comprehensive multi-merchant frameworks featuring dynamic inventory splitting, custom variant trees, and individual vendor payouts.

ExamBuzz – Automated Assessment & Online Exam Platform

Tech Stack: React.js, PHP (Laravel), WebSockets, MySQL

- Developed adaptive examination processing frameworks capable of handling randomized multi-category question pools.
- Programmed secure client-side browser tracking scripts to handle stringent test parameters, custom timers, and anti-cheat indicators.

IMVS for DPHE – Government Progress Monitoring & Verification System **Tech Stack:** Nuxt 3, PHP (Laravel), GIS/GPS Mapping APIs, PostgreSQL

- Designed a massive centralized project tracking platform containing multi-tier user groups, project divisions, and granular permission states.
- Integrated specialized GIS mapping and hardware GPS tracking links to ensure highly accurate, verified on-site worker records.

Multi-Agent AI Travel Planner Engine **Tech Stack:** Python, FastAPI, OpenAI Agents SDK, Streamlit, Pydantic, Logfire

- Developed a scalable asynchronous multi-agent orchestration grid featuring specialized agents for flight mapping and context maps.
- Integrated real-time runtime monitoring using Logfire for deep visibility into prompt routing, token spend, and agent delegation calls.

Context-Based RAG AI Chat & Voice Systems **Tech Stack:** Python, FastAPI, LangChain, FAISS, Whisper ASR, MMS-TTS, GPT-4

- Engineered a data-isolated semantic extraction system enabling multi-turn conversations across localized document spaces via FAISS vector indices.
- Architected native voice modules mapping automated audio processing using Whisper ASR and MMS-TTS translation frameworks.

Computer Vision Virtual Try-On System **Tech Stack:** Python, OpenCV, YOLO, Segment Anything Model (SAM), Roboflow API

- Constructed an automated deep learning garment segmentation architecture for selective fashion item extraction and manipulation.
- Orchestrated YOLO algorithms to isolate clothing boundaries while employing Meta’s SAM to construct high-fidelity object masks.

EDUCATION

B.Sc. in Computer Science & Engineering

Bangladesh Army International University of Science and Technology (BAIUST)

Apr 2017 – Feb 2021

Cumilla, Bangladesh

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**, Amazon Web Services (AWS). Issued for expertise in cloud infrastructure design, security parameters, microservices orchestration, and scalable cloud data structures. [View Credential Verification](#)

ADDITIONAL INFORMATION & INTERPERSONAL SKILLS

- **Operating Systems & Environments:** Fluency across Linux distributions (Ubuntu Server, Kali Linux), macOS environments, and Windows with WSL2.
- **Engineering Methodologies:** Experience in agile environments using Scrum sprint styles, continuous delivery (CI/CD), Jira, and Git tree management.
- **Algorithmic Problem Solving:** Avid competitive programmer. Profiles visible at: HackerRank ([shohorabshanto](#)) and Codeforces ([shohorab_ahmed](#)).
